

Great Moments,

The Journals current issue is available with amazing studies on box trial review on blood-pressure management in post-cardiac arrest care, impact study of hypertensive disorders of pregnancy on cognitive functioning of the offspring, studies on high-intensity statins in acute coronary syndrome presented in two parts as separate articles, an insightful review on hypertensive encephalopathy.

With the help and support of our readers, and contributors, we plan to make a leap into the next stage of development in terms of indexing development, ethics, and global ranking growth of the journal.

We can, and we will reach there, God willing!

Happy Researching!
