## Dear Readers,

It is my pleasure to present to you the second issue of the Journal of Comprehensive Clinical Practice for the year 2023. It is simply impossible to bring out an issue without the contribution of our authors and the untiring efforts of our reviewers, both of whom I wish to thank profusely!

For the past few months, I have been observing my elder daughter discussing career options with her family and friends in school. It has surprised and disappointed me that lesser number of children are opting for medicine as a career. I wonder if this is because of society's negative perception of doctors. I sincerely believe that the medical profession is one of the most satisfying professions ever. The ability to be God's medium in alleviating someone's pain and misery should be reason enough to inspire many.

Today's Gen Z wants a fast-track way to financial settlement and medicine indeed may seem like a long, long road to them. Maybe, we can all do our bit to inspire our children to see the beauty of our profession. This is important because we will also need smart doctors to attend to us when we are older! We must also inspire them to take up academics and invest time and effort in teaching and research, for it is only through research and teaching that the dissemination of such valuable knowledge occurs which can help millions of people.

So, here is hoping that everyone enjoys reading and contributing to our Journal of Comprehensive Clinical Practice!
