

Complex Wound Management: Hidden Challenges for Plastic Surgeons

Veena K. Singh, Department of Burns and Plastic Surgery, All India Institute of Medical Sciences, Patna, Bihar, India

Keywords: Complex wound management, Editorial, Plastic surgery, Patna Journal of Medicine

With immense pleasure, we bring out this issue aimed at enhancing knowledge, sharing, and learning. The issue highlights the hidden challenges in complex wound management faced by the plastic surgeons. We are pleased to introduce various impactful *original studies* like facial wound coverage using split skin graft from the scalp, scalp wound, random vs axial pattern outcomes local fasciocutaneous flap for tendoachilles region defects, and changing pattern of burns in a private hospital.

Further, this issue has an interesting *review article* on mechanotransduction of wound healing, along with *case reports* on radiation and wound healing, management of complex lower limb burn wound, reconstruction of sacral pressure sore in patients with superior gluteal artery perforator flap, salvaging complicated leg wound along with an engaging *pictorial essay* on various presentation, evaluation and management of fingertip injuries.
