Journal of Research in Medical & Interpathy Sciences. 2(1);2024

Happy Moments,

The first issue of 2024 of the Journal of Research in Medicine and Interpathy Sciences presents a diverse array of groundbreaking studies. Our featured articles span critical topics: from evaluating the efficacy of percutaneous nephrolithotomy for complex kidney stones to the implications of cytological grading in thyroiditis. We explore maternal outcomes in premature rupture of membranes, innovative methods for diabetes prediction, and the vital role of genetic diagnostics in Gaucher disease.

This issue also addresses crucial issues such as improving access to assistive technology, the significance of the golden hour in maternal collapse, and a rare case of invasive ductal carcinoma presenting as sclerotic plaques. This collection highlights both the challenges and advancements in contemporary medical science.

We extend our heartfelt gratitude to our readers and contributors for their invaluable support and dedication. We continue to enhance the journal's development, focusing on indexing, ethical standards, and overall quality.

We look forward to further advancing our mission and wish you happy and impactful researching!

Best Regards,

The Editor,
